To assist you with planning your trip to the 2010 NASA Occupational Health (OH) Meeting in San Antonio, TX, please find included some helpful information pertaining to transportation, accommodations and the technical tour on Friday, June 11.

So you know before you go...

Onsite Registration:

As with previous meetings, there will again be registration on Sunday, June 6th from 4:00-6:00 PM. You are encouraged to take advantage of the Sunday registration opportunity. As a reminder, you **MUST SIGN IN DAILY** to have your attendance recorded for accreditation purposes, by registering on Sunday it may save you a little bit of time on your way to your Professional Development Course (PDC).

Website:

Please be sure to check the NASA OH website: http://www.ohp.nasa.gov/conference_info/conf_gen/2010/ohconf/index.html for meeting updates, changes and downloadable presentation materials.

Meeting Registration:

If you have not registered for your discipline specific Professional Development Course (PDC) or the Friday, June 11 Technical Tour of the Southwest Research Institute (SwRI), please do so as soon as possible. Also, the SwRI has asked that all tour attendees wear comfortable shoes and respect the policy of "No Cameras".

Area Transportation:

Once you arrive in San Antonio, getting around is easy and convenient. There are several transportation options available at the airport: nine on-site rental car agencies, taxis, shuttles and buses. The Hotel Contessa is conveniently located in the business district along San Antonio's River Walk. Getting around downtown on foot or through the VIA Streetcar System is recommended. Kiosks for the VIA System are located on major street routes as well as through the front desk at the Hotel Contessa.

Technical Tour: Southwest Research Institute (SwRI)

About Southwest Research Institute

Southwest Research Institute, headquartered in San Antonio, Texas, is one of the oldest and largest independent, nonprofit, applied research and development organizations in the U.S. Founded in 1947, SwRI provides contract research and development services to industrial and government clients in the U.S. and abroad. Headquartered on 1,200 acres in San Antonio, SwRI has more than 2 million square feet of office and laboratory facilities. SwRI also has offices and laboratories in several states. Its staff of approximately 3,200 conducts more than 2,000 projects a year. SwRI has 12 technical divisions that offer multidisciplinary, problem solving services in a variety of areas in engineering and the physical sciences. SwRI's total revenue for fiscal year 2009 was \$564 million.

About Your Visit and Tour

The visit will begin with two technical presentations representing just a small sampling of the many projects under way at SwRI. Dr. Randy Gladstone, an Institute scientist in SwRI's Space Science and Engineering Division, will describe the Lyman Alpha Mapping Project, or LAMP, instrument developed for NASA's Lunar Reconnaissance Orbiter mission, which launched last June. Carl Weiss, a senior research engineer in the Mechanical Engineering Division, will discuss various test methodologies used at SwRI to study the response of structures to explosive loading.

Onsite Tours

Following the presentations and a brief refreshment break, attendees will board the buses for two tour sites. Staff members in SwRI's Engine, Emissions and Vehicle Research Division will lead a tour of the Institute's emissions laboratories. Emissions testing at SwRI has been a core program for more than 60 years. A second tour site is the 10-acre, outdoor Ballistics and Explosives Test Range used to conduct high-speed impact testing and to study the response of materials to energetic events.
